Using climate  
information to  
build resilience  
to water scarcity  
in the Horn of  
Africa Drylands

©Diana Njeru

**DOWN2EARTH** is looking to expand its stakeholder network and to collaborate on achieving real impact in Horn of Africa Drylands.

## MAIN DOWN2EARTH OUTPUTS:

- New models supporting seasonal forecasts of water and food insecurity, as well as impacts of future climate change
- Novel water forecasts for HAD rainy seasons disseminated via GHACOF and ICPAC's East Africa Hazards Watch desktop app
- Climate adaptation policies designed to support interactions between rural communities, climate services, and government
- New automatic weather stations to fill in regional gaps in rainfall data collection in Somalia
- Apps for delivering critical climate impact information to a range of stakeholders

Please get in touch with us to explore how we can collaborate with you:
